What is NDB LogManager

The NDB LogManager product family is a full-featured logging/auditing solution for NexusDB V2. NDB LogManager logs data changes in the database for different data manipulation operations (Delete/Insert/Update) on user-definable database objects (tables, columns). A point-and-click interface enables you to define easily, which database objects should be logged. If you are interested in logging a history of price changes in a table ARTICLE, just define it with one mouse-click and relax.

Application Areas

- To answer questions like: "Who has when modified, deleted or inserted a certain record?"
- Change logs for statistical purposes (e.g. price fluctuations, ...)
- Tweak your client application regarding DML operations
- "Black Box Debugging" to see what DML operations are involved when you click a button in a foreign application
- Audit trails as a necessity to conform to different application domain quality standards (e.g. US Food & Drug Administration, ...)

- Data logs to recover a database to a specific point in time or to undo data changes or to keep several slave databases with one master database in-sync

Features

- Supports NexusDB V2
- Supports table operation logging
- Supports table column logging
- Supported datatypes for column logging are all data types except BYTEARRAY
- Supports user-definable conditional logging
- Logging mechanism is integrated in the database. No extra coding in your client application necessary
- A powerful Prepare-Wizard supports you in creating all necessary logging metadata objects
- Load/Save logging metadata names within the Prepare-Wizard from/to a file
- Unprepare-Wizard cleans up your database from all logging data and logging metadata
- Supports a user-friendly way to define which database objects should be logged
- Definition of operation/column logging for a specific table or the complete database with one step
- Logging definition can be reused on similar databases by using the built-in logging definition Import/Export functionality
- Logging metadata of a prepared database can be exported and used on an unprepared database to prepare it without using the Prepare-Wizard
- Disable logging temporarily before doing a data import process without deleting all logging definitions (not available until NexusDB V2 will allow enabling/disabling triggers)
- Scripting engine to automate repetitive tasks in a script based way
- Shows statistics how many operations and columns are registered for logging
- Supports browsing in logged data
- Load/Save browsing criterias from/to a file
- Logged data can be exported into one of the following formats (PDF, MS Excel, MS Word, RTF, HTML, Text, XML, CSV, DIFF, SYLK, LaTeX, SQL, Windows Clipboard)
- Logdata reporting ability. (not available yet)
- Online-Help
- A Read-Only version of NDB LogManager called NDBLMViewer, only for browsing, exporting and printing logged data is available as separate product.
- AddOn: NDBLMExport – The NDBLM Log Data Export Utility
- Registered users have unlimited E-Mail support and longlife product updates free of charge

NDBLM Addon's

- **NDBLMViewer:** Same code base as NDB LogManager, but without the capability to change the logging schema.
- **NDBLMExport (Command line utility):** Export logged data into different formats.

Pricing

NDB LogManager	Price/License
1 User License	
includes developer license (not for deployment) for NDBLMExport	
1-4 license(s)	99,00 EUR
5-9 licenses	80,00 EUR
10 and more	73,00 EUR
Unlimited Bundle License*	4990,00 EUR
Site License	
Site License	579,00 EUR
NDBLMViewer	Price/License
1 User License	
1-4 license(s)	39,00 EUR
5-9 licenses	32,00 EUR
10 and more	29,00 EUR
Unlimited Bundle License*	1990,00 EUR
Site License	
Site License	229,00 EUR
NDBLMExport	Price/License
1 User License	
1-4 license(s)	39,00 EUR
5-9 licenses	32,00 EUR
10 and more	29,00 EUR
Unlimited Bundle License*	1990,00 EUR
Site License	
Site License	229,00 EUR
